

**E**clipse Hard Trainer Pack is designed to regulate cortisol and provide the body with crucial micronutrients and amino acids needed to sustain a high intensity-training program. The harder someone trains the more cortisol the body produces. Cortisol is a catabolic hormone that breaks down muscle tissue. The Hard Trainer pack may regulate cortisol production and promote anabolism by feeding the muscle free form amino acids, OKG, and a host of other powerful compounds.\*

**Suggested Use:** As a dietary supplement, take 1 packet 60 minutes prior to workout.
