The Intelligent Choice in Sport Nutrition™

Shrink Wrap™

High Definition Water Extraction Formula

Eclipse ShrinkWrap High Definition Water Extraction Formula may help the body to regulate excess water. This **Non-Stimulant** synergistic blend of high definition herbal ingredients may regulate excess water and thus may cause the skin to appear “shrink wrapped” to the body. The regulation of water just beneath the skin may enhance muscular definition and promote vascularity. Eclipse ShrinkWrap is best used in conjunction with an exercise and diet plan. Results may vary depending upon percentage of body fat. Eclipse ShrinkWrap may be used with other Eclipse thermogenic supplements in order to enhance results due to the non-stimulant formula.

Dandelion root, latin name *Taraxacum Officinale* contains terpene/sterol compounds such as beta-amyrin, taraxasterol, and taraxerol, as well as free sterols (sitosterin, stigmasterin, and phytosterin).¹ The principal constituents responsible for dandelion's effect on the digestive system and liver are the bitter principles. Previously referred to as taraxacin, these constituents are sesquiterpene lactones of the eudesmanolide and germacranolide type and are unique to dandelion.² The leaves are a rich source of potassium, which is interesting since the leaves are used for their diuretic action. This may make dandelion the only naturally occurring potassium-sparing diuretic, although its diuretic action is likely different from pharmaceuticals. At high doses, the leaves have been shown to possess diuretic effects comparable to the prescription diuretic frusemide (Lasix).³ Since clinical data in humans is sparse, it is advisable to seek the guidance of a physician trained in herbal medicine before using dandelion leaves for water balance.

Uva Ursi is also referred to as bearberry, kinnickinick, whortleberry, bear's grape, mountain cranberry and mealberry. The leaves of this small shrub have been used as an herbal folk medicine for centuries as a mild diuretic and astringent. Uva Ursi contains a plant glycoside, Arbutin, which breaks down

in the body to form hydroquinone, a chemical compound that serves as an effective astringent.⁴ Uva Ursi contains other compounds, among them ursolic acid, which are also known to regulate water balance.

Juniper, Latin name *Juniperus communis*, is a short evergreen shrub whose fruit and oil provides a flavoring agent used extensively in the food, perfume and soap industries. The volatile oils of Juniper Berries, particularly 4-terpineol, may regulate water balance.⁵

Buchu, Latin name *Agathosma betulina*, is a small shrub native to South Africa where it is used as a popular flavoring agent to impart a peppermint-like flavor to brandies and wines. Employed as a diuretic and antiseptic, the long leaves of this herb are brewed for use.⁶ Buchu contains 'barosma champhor' and other volatile oils, which account for its mild diuretic and antiseptic activity.

In summary, **Eclipse ShrinkWrap High Definition Water Extraction Formula** may help the body to regulate excess water. The

regulation of water just beneath the skin can dramatically effect the appearance of the muscles. Excess water just beneath the skin tends to resemble fat and causes a smooth appearance. A hard razor sharp physique occurs when bodyfat and water just beneath the skin is regulated.*
